Description

'asistemas' was established in 2000 with a single mission: to deliver innovative, high-tech solutions for a better tomorrow. Company specializes in engineering, automation, programming projects and metalworking. We produce low-medium voltage electric and automation equipment according to our customer needs and technical requirements. From the date of establishment number of employees has increased 50%, premises for production – 66%, export – till 40%. With the 20 years knowledge and skills acquired in the design and production of the electrical equipment and systems we are able to support our customers from an idea stage, offering them the best solutions according to their needs. Every solution we create aims at achieving our customers' key goals: • Shortening project lead times • Minimizing design errors in all project phases • Increasing efficiency of change management • Enhancing information accessibility

Business Line

LV and MV power protection, distribution, measuring and monitoring equipment, compact substation design and production: switchgear, switchboard, controlgear, MCC, PLC, AC/DC... Serial production. Engineering, on-site services.

List of products

'asistemos' assists their clients by proposing innovations and high working standards gained from 20 years of work experience in the field of electrotechnical and automation equipment production and programming: Frame module design transformer substation, Transformer substation, transformer station, Power factor correction cabinet, Low voltage cell centre system, IP20-IP55 Enclosures and cell centre, Motor control center MCC, Fixed-structured enclosure, Outdoor protective cabinet, Cable transit & metering cabinet, Incoming electrical metering cabinet, Schneider Prisma wall-mounted and floor standing switchboard, IP20-IP30 Group centre enclosure, Variable frequency drive system, Control and process automation cabinet, Alternating and direct current cabinet AC/DC, Relay protection and control system, Switchgear, switchboard, controlgear, In the last years we expanded the range of services offering the design of engineering systems, pneumatic products / systems assembly.
