Description

The Company Antrocelas UAB was established in 2000. Founders of the Company is a group of experts with extensive experience in the field of collecting, processing and recycling of secondary raw materials (paper, etc.). It is after combining knowledge and invoking efforts of the country scientists when a unique product named ANTROCEL® has been developed. It is a cellulosic additive for asphalt concrete mixtures. Only after obtaining the highest quality evaluation of the product from Lithuanian experts and those of other countries was a technology developed enabling the production of ANTROCEL® in huge volumes. Product ANTROCEL® has got no analogues in Eastern Europe, and there are only a few companies in Western Europe that produce partly similar products. For today, Antrocelas UAB is a modern company engaged in the development, production and selling of cellulosic additives for asphalt concrete mixtures. Products of the Company have received a very high evaluation in the markets of Lithuania, Latvia, Estonia, Poland, Belarus, Russia and Ukraine. The basis of the Company's success is not just the quality of its products, but also continuous and close cooperation with the clients, as well as the provision of qualified consultations to the clients before and after the sale of the product.
