- Sweden

Description

JSC “Ailena” is a modern company offering packaging solutions to industrial firms. Over time we manage to increase the number of implemented orders not only by selling but also manufacturing products. Our smooth activity, the growing experience in packaging materials field and solid material base of our company has allowed us to purchase quality equipment necessary to carry out the packing materials production processes. We chose low density polyethylene (LDPE) pellets as raw material for processing and production. By processing LDPE and manufacturing secondary products we take care of nature, protecting it from further environmental pollution with plastic. Currently we produce three types of products using recycled LDPE: polyethylene packaging film, capsules for flowers, garbage bags. We produce a promotional adhesive tape with customer logo using another production materials – two axes oriented polypropylene (PP) and paper (KRAFT).

Business Line

Packaging materials

List of products

- Packaging materials - Load securing - Insulation materials - Packaging for agriculture
