Description

Bioenergy LT is the largest innovative biotechnology company in Northern Europe in terms of production capacity. With the help of advanced production technologies, it develops and manufactures microbiological products for the optimisation of plant nutrition and restoration of natural soil fertility. The products manufactured by Bioenergy LT have already gained the trust of customers not only in Lithuania but also abroad. We are looking for distributors and sales representatives all over the world to sell the biofertilizers we produce.

Business Line

Biofertilizers

List of products

We manufacture biological products that increase soil fertility, restore its natural balance and increase plant productivity. Our main products consist of bacterias that fix nitrogen, release phosphorus, increase potassium absorption and fight with plant diseases that are caused by fungies.
