**Description**

Our company specializes in amber processing and manufacturing of amber related products. The range of our products varies from handmade amber covered pictures reproductions to different size and shape souvenirs. For our products we are using colorimetrically sorted Baltic amber that is divided into 30 possible categories depending on color hue. In process of amberpictures manufacturing the shades of amber are matched to colouring of base image. You can order reproductions and souvenirs from our catalogue or we can make a unique and exclusive picture covered with sorted amber according to the customer's sketch or supplied image, suitable for reproduction. Base image will be printed using especially long lasting Epson Ultrachrome K3 pigmented ink. For additional image durability improvement against light and climate influence we use special warnishing with UV-filtering capability on last production finishing stage. That help us to provide the customers with the highest printing and amber coating quality and long lasting esthetic value products.
