Description

As biofuel energy developers, we can offer advanced and unique solutions for projects of various sizes and types that we can design, assemble, install and maintain. The advantages of our biofuel solutions include the adaptation of existing boiler plants to burn biofuel and the implementation of new projects from coordination to ignition. We can change projects according to the desired biofuel type and install automated systems that are easy to control. Our biofuel boiler plants burn fuel efficiently, so the costs of running them are low: up to 30% lower heating costs in cities and up to 50% lower energy costs in the industrial sector. They also produce less residual products and airborne particulates, meeting the highest environmental protection requirements.

Business Line

Biofuel energy solutions

List of products

Heating substation modules Biofuel-fired boiler houses Biofuel analysis laboratory Flue gas cleaning equipment Biofuel boilers Water heating boilers Thermal oil boiler Steam boilers Conveyors
