## Description

JSC Ekologistika is one of the largest tire processing companies in the Baltic countries. In 2015 we first encountered a problem with the recovery of used tires. It inspired us with a new idea - to create a tire recycling plant where tires are recyclable and the raw material reused. After several years of development, mistakes and reliable partner assistance, in 2017 we began to completely recycle tires, export products to other countries, and became one of the largest tire recycling companies.
