Description

We examined which vitamins and minerals the body really needs Our team and network of Scientists, Pharmacists, Personal Nutritionists and Health Specialists examined which vitamins and minerals the body really needs. Oral vitamin sprays have a vitamin absorption rate of 93-95%. By comparison, pills and capsules come in at just 10 - 30%. Inovative FortiVitum's dispenser is specially designed to deliver 30 - 40% smaller droplets of nutrients direct to your system. This is how we attain our exceptionally high absorption rates. Our product contains no corn syrup, artificial colours, flavours and sweeteners, polysorbate 80, thickeners and other questionable ingredients. We kept only the best quality vitamins, minerals and herbal extracts. Most oral spray supplements on the market contain a very low concentration of active ingredients. Others contain inferior ingredients and artificial additives. Fortivitum offers by far the best concentration and absorption rates on the market.

Business Line

Oral vitamin and supplement sprays
