Description

Here at Energus Power Solutions, we change the way people look at energy storage. Our main objective is to provide solutions for competitive clean transportation and energy independence. On top of passive safety features provided by the cells and our unique battery design, we offer a smart Battery Management System. The BMS monitors all parameters of the battery in real time and controls them accordingly: temperature, voltage, current limits in various modes of operation are supervised and controlled, cells are balanced to identical state of charge to prolong battery life and operating time. All parameters are configurable and available via open serial communication protocol. The same protocol is used for statistical analysis, event review and live data streaming, as well as displaying data on our Android app. Free firmware updates are included as well.

Business Line

Battery management, Li-on modules

List of products

Li-ion modules for rapid prototyping Universal battery management systems Custom battery packs, mobile and stationary.
