Description

In the late '90s, the ATEC group introduced the "ATEC" lines of injection moulding machines to the European markets. Designed for Europe and manufactured in Asia, our main focus was to offer the most compatible and cost-effective injection moulding machines in these markets. In the years since, as we work with our clients to meet their growing needs, ATEC increasingly focused on providing comprehensive production solutions. These not only include injection moulding machines, but also a whole range of supporting equipment and components. Contact us for more information about how we can help your business!

Business Line
