## Description

BaCloud is operating its own data center since 2005 which is located in Europe, Lithuania. It's an ideal location for data center due to high availability and high capacity of electricity and internet communications. By the end of 2018 we launched a new location for BaCloud clients at Chicago, USA, offering Linux and Windows VPS and later - hosting services for our USA clients. In the second quarter of 2020 we launched a new location for BaCloud clients at Netherlands, offering Linux and Windows VPS and hosting services. We control our data center, and that way we control the whole process of service delivery and up-time. Our long-term experience allows us to use our knowledge in the process of maximizing the quality of our services.
