Description

Cogastro helps edible insect farmers digitize data collection and analyse processes. IoT based applied to mealworms, black soldier flies and cricket farms of any size. The solution integrates with the existing farm equipment. In addition, the Cogastro mobile application digitizes data collection process. Cogastro's web application visualizes farming performance through reports that are updated constantly. It brings structure to your data entry process and ensures traceability. Cogastro empowers edible insect farmers to improve farm efficiency and to increase revenue based on data driven decisions.

Business Line

SaaS performance management system for insect farms

List of products

SaaS performance management system for insect farms Every farm is different and requires a tailored implementation. Regardless of the solution, we deliver value across the following areas: Convenience – remotely monitor and manage every facility across your network. Add and manage multiple facilities in multiple locations from one place— plan and monitor operations across numerous farms. Focus on secure farming - cloud-based access provides that data is owned only by the farm. Efficiency – Capture results and

improve farming techniques. Plan your production rates & control production quality. Easily adjust grow areas, employee's setup, and streams ratio as you scale. Standardize the process and transfer it quickly when scaling. Compliance – Full cycle tracking and traceability for regulatory compliance. Barcode traceability for batch tracking. Data reports for feed and food safety compliance. Critical performance indicators tracking, and goals management.
