Description

As a full turnkey developer and provider, Nordhill Industry offers complete system or sub-system assembly, also known as box-build service. We focus on building products for OEMs and taking on contract manufacturing work. Based on engineering drawings, we manage complex value-added processes, involving creation of machines, parts, and structures from various raw materials and sub-assemblies. Nordhill Industry provides electronics manufacturing services for low- and mid-volume products. We have particular expertise in the design and manufacture of specialty industrial automation modules. We provide this service to OEMs with control products who are looking for optimization or free up their resources and production lines for other priorities.

Business Line

Electronics & Mechanical Manufacturing & Assembly, Metal Fabrication
