Description

Since 2015, we have started offering solutions for very demanding PV investors, focusing on maximized yields. The market has evolved, therefore now our entire value chain – design, selection of components and equipment, construction methodologies, testing, monitoring, operation and maintenance – is focused in lowering the levelized cost of produced electricity. Since 2018 actively involved in renewable energy access projects for refugee settlements. Until now we have participated in the development, planning and realization of more than 30 renewable projects in Georgia, Armenia, Moldova, Nigeria, Ivory Coast. Starting with projects of few tens of kW and up to tens of MW installed capacity.
