Description

We at UAB "Tigbis" have been engaged in designing and manufacturing a wide range of electronic components for over 15 years. Our team consists of a strong link between industry experience and youthful enthusiasm by containing a group of experienced engineers and talented graduates from Vilnius Tech and Kaunas University of Technology. By utilizing our procedural knowledge we are able to design, manufacture and maintain a wide range of custom products which are reliable and unique in terms of technical and operational characteristics.

Business Line

Hardware manufacturing and software development

List of products

Ether & internet control and data interception systems: Passive and active radio monitoring of GSM/UMTS(WCDMA)/LTE cellular networks; Radio monitoring of information circulating in Wi-Fi wireless networks; Lawful interception for monitoring centers by intercepting data from various networks such as PSTN, GSM, GPRS, UMTS, LTE and IP.
