## Description

Pikotera, UAB works in electronics products development and certification fields. One of the company's core activities is the development of embedded systems that are subject to the requirements of automation or remote control and optimal energy consumption. The latter requirements are related to ensuring the overall low environmental impact of the equipment. Pikotera UAB also embeds various sensors that record mechanical, pressure, temperature, humidity, gas concentration, acoustic environmental parameters and specialized process monitoring data. Due to the development of the products with a low environmental impact, the company is confident that its existing knowledge and experience can be applied extensively to monitor, analyse and enhance industrial processes towards sustainability and carbon footprint reduction.
