Description

PLASTA is one of the largest polyethylene recycler and plastic products producer in Europe employing more than 500 people. PLASTA production plant is situated on a 12 hectare site with 80000 sq. meters of production space. Engineering is also an important part of PLASTAs business for more than 50 years. PLASTA | Recycling More than 30 thousand tons of post-consumer plastic waste is recycled every year. Volumes are constantly increasing due to continuous growth of the company. PLASTA develops and implements the most advanced recycling technologies and has invaluable know-how in this field. PLASTA | Production Over 20.000 tons per annum of plastic products are produced out of recycled raw material produced in-house. Our round-the-clock production runs on more than 90 extrusion machines.   PLASTA'S flagship product is waste bags. Half a billion bags are sold every year. Pipes, film, hermetic containers, buckets, barrels, plastic sheets make up the balance of items produced. PLASTA | Engineering The company provides services of manufacturing of mechanical parts or equipment and restoration of mechanical parts for plastics recycling industry. Ability to produce various sizes and complexity of metal products – from a shaft to a cylinder made in deep drilling mode. The company specializes in production and restoration of large-sized spare parts and plastic production equipment.
