Description

Axis Industries is a group of enterprises which includes these main companies: Axis Industries, Axis Technologies and Axis Power. Axis Industries designs and manufactures heating, water metering and data management devices, other engineering products and solutions for cities, industry and energy sector. The company also owns the metal processing depot, renders technical maintenance and supervision services based on smart technologies. Axis Power sells the products designed and manufactured by Axis Industries: heating, water metering and data management devices, biofuel combustion equipment and electrical commutation equipment. Axis Technologies designs and implements projects in the fields of biofuel energy, boiler-house and power-station, electricity and automation, carries out construction and modernisation works in the Baltic States and other foreign countries. AXIOMA, a new brand, has united Axis Industries group enterprises and their products.

Business Line

List of products

AXIOMA brand family represents 20 years of experience acquired in creating most effective engineering solutions for industry and energy sector. Axioma products are divided into four groups according to their functional specifics, however they share one common feature - effectiveness. ENCO – product group for data acquisition and control. XILO – product group of various biofuel-fired boilers and process equipment for biofuel combustion. QALCO – product group of metering devices. SOLVO – product group for industrial process control and automation. Here we also offer electricity products – electric power switching devices, design and installation of electric power transmission and distribution equipment.
